

**ARCA ADMINISTRATORS MEETING
FRIDAY, JULY 21, 2017**

OAI-PMH and discovery tools:

- OAI-PMH is the easiest way to get repository content indexed by EDS, Summon, etc.
- Several sites are working on this, but none have implemented it yet.
- Discovery tools provide questionnaires to fill out, identifying which elements contain which data; the Office can assist with this.

New features:

- Statistics report page:
 - All sites can access a page of per-object usage stats, and downloadable spreadsheet.
 - Access it at (yoursite)/download_stats
 - If it's not available, clear your site cache.
- New module: Islandora OAI Download Link
 - Adds an element in the OAI feed with a download link to the object's file.
 - Apparently required by EDS and some harvesters.
 - To use, enable the module, then go to admin/islandora/tools/islandora-oai and select and configure the "Islandora OAI with download links" request handler.
- Islandora Owner Permissions:
 - A discoverygarden module that allows users who have ingested objects some permissions to manage those objects.
 - Note that it does not allow users to replace datastreams (a bug in the module).
